UPDATING YOUR COMPUTER AND OTHER ELECTRONIC DEVICES

5 REASONS TO KEEP YOUR DEVICES UPDATED

- PATCH SECURITY FLAWS
- GET NEW FEATURES
- PROTECT DATA
- IMPROVE PERFORMANCE
- ENSURE COMPATIBILITY

WHY ARE UPDATES IMPORTANT?

Security is the No. 1 reason to update software immediately. Software vulnerabilities enable cybercriminals to access a person's computer. Installing updates may add new features and remove old ones that are no longer necessary. Technology is constantly changing, and updates offer the latest features and improvements. Not all patches are security related. Software vendors may find bugs in a program or need to make necessary enhancements to a program. These patches help improve the performance of the software.
